

## Global Portfolio Series Performance (USD UCITS Implementation)

### PortfolioMetrix Global Portfolio Series Performance (USD) - UCITS

Time Period: 12/1/2015 to 12/31/2025

**Methodology:** Returns are annualised when the measurement period is greater than one year (except if stated otherwise) and risk is calculated by using the monthly standard deviation of returns, annualised. The cash basis for the benchmark is determined by the International Monetary Fund's Special Drawing Rights (SDR), estimating a representative global cash benchmark. The performance composite of the profile is compiled from two sources, the first contributes performance from inception to 2019/01/31 for Profiles 4 to 7 and from inception to 2020/01/31 for Profile 3 and was based on fully investable model portfolios made available at Capital International Group. Thereafter the performance is based on the Blended UCITS methodology (Interpolated Solution), as identified by a thick-weight time series. Full calculation methodology available on request.

### Performance as denoted in US Dollars (USD)

	Risk	Cumulative Return	Annualised Return
PMX GPS Profile 3	9.7	66.3	5.2
PMX GPS Profile 4	10.7	76.4	5.8
PMX GPS Profile 5	11.9	93.7	6.8
PMX GPS Profile 6	13.0	109.5	7.6
PMX GPS Profile 7	14.2	128.1	8.5
